

1MW Server Rack Solution

The 800 VDC sidecar is the first solution on the way to 1 MW IT racks but it won't be the only solution. We plan to continuously innovate power distribution and back-up solutions to drive ...

Enter an unexpected solution inspired by the electric vehicle (EV) revolution: 1 megawatt (1MW) water-cooled racks. This tech-forward approach to data center design is a game-changer, ...

Google outlines new AI data center infrastructure with +/-400 VDC power and liquid cooling to handle 1MW racks and rising thermal loads.

At the 2025 Open Compute Project Summit, we announced a +/-400 VDC enabling 1 MW IT racks, and the Project Deschutes liquid cooling distribution unit.

Given rapid growth in the server and artificial intelligence (AI) markets, the amount of energy required per rack is increasing from 100kW to >1MW. This increase requires designers to fundamentally ...

Google is planning for datacenter racks supporting 1 MW of IT hardware loads, plus the cooling infrastructure to cope, as AI processing continues to grow ever more energy intensive.

Nvidia is developing a new power infrastructure called the 800V HVDC architecture to deliver the power requirements of 1 MW server racks and more, with plans to deploy it by 2027.

Google is collaborating with Meta and Microsoft under the Mt Diablo project to standardize this new high-voltage power architecture, leveraging the mature EV supply chain for scale and ...

That means 1MW is a wild leap from the 15 kW less racks that permeate data centers today. It's even a giant jump from the high-performance 40-100 kW rack power levels people initially ...
