

Acceptance of farmers for installing photovoltaic panels

U.S. farms -- more than 116,000, as of 2022 -- are increasingly embracing solar as a buffer against volatile crop prices and rising expenses.

A new SI2 report shows that more than 70% of farmers are open to agrivoltaics if they can keep farming. Survey results are the first national insights into solar on farmland.

If you're a farmer considering solar energy, it's essential to understand the various solar tax credits available to farmers. This guide will provide you with valuable information on eligibility, ...

Solar panels on your farm can lower operational costs. Learn how to secure federal funding for solar energy on your farm or ranch.

In 2025, public acceptance of solar farms is no longer just about clean energy--it's also about what happens on the land underneath them. When solar installations are paired with crops or ...

Farmers can benefit from solar energy in several ways--by leasing farmland for solar; installing a solar system on a house, barn, or other building; or through agrivoltaics.

With their reflective, smooth glass sheen, stiff metal posts, and electric wiring, you might be surprised to learn that solar fields can be sites of thriving biodiversity, regenerative agriculture, ...

By producing their own clean electricity, farmers can protect their livelihoods from an increasingly strained grid. Many farmers across America are choosing solar for its reliability and ...

This dual land-use approach allows solar energy production to coexist with farming activities, from crop cultivation to livestock grazing and supporting pollinator habitats.

It provides financial assistance to farmers and rural small businesses who want to install renewable energy systems, including solar panels for farms. In 2025, eligible applicants can receive ...
