

Australia downgrades PV module exports

This presents a key change for the solar industry, where historically all applications in South Australia were auto approved for 5kW per phase export, solar retailers must now check what export options ...

Major economies such as the US, EU and India have only recently introduced unprecedented policy support to expand their domestic PV manufacturing capability - this changes ...

For more than half a decade now, payments for solar exports -- or feed-in tariffs, as they are known -- have been on a downhill slide. New South Wales' economic watchdog recently dashed ...

High stakes Australia expects to rely on solar for 70% of its future low-carbon energy. Rather than hydro or offshore wind, solar is where Australia shines - but not without panels.

Global competition for clean energy industries is accelerating and Australia wants to join the race. The Australian Government plans to invest \$1 billion in domestic solar manufacturing to ...

If your business is feeling the impact of declining solar export tariffs, start exploring these practical solutions today. Adopting an integrated, proactive energy management approach ensures ...

The program aims to support innovative manufacturing facilities in Australia across the solar PV supply chain. The solar PV supply chain includes polysilicon production, production of ...

Solar PV Global Supply Chains - Analysis and key findings. A report by the International Energy Agency.

To manage this, grid operators have put a limit on how much of our excess solar we can export to the grid - typically 5 kilowatts per house or as low as 1.5 kW in South Australia. This means...
