Reference publications, financial results, visits to our sites and facilities, education about electricity... find all the tools here so you don't miss a thing about the activity and transformation of the EDF group.

Overview of Electricity Policy instruments See also Electricity Policy instruments of France (EDF) is the main electricity generation and distribution company in France. It was founded on 8 April 1946 as a result of the nationalisation of a number of electricity producers, transporters and distributors by the Communist Minister of Industrial Production Marcel Paul. Until 19 November 2004 it was a government corporation, but it is now a limited-liability corporation under private law (société anonyme). The French government partially floated shares of the comp...

Track real-time power generation in France per energy source based on remotely monitored data and forecasts.
