

Ethiopia electric vehicle safety

Is Ethiopia a leader in Africa's electric vehicle transition?

Ethiopia has emerged as an unexpected leader in Africa's electric vehicle (EV) transition. In 2023, the country became the first in the world to ban imports of internal combustion engine (ICE) vehicles.

What does Ethiopia's EV push mean for the EV industry?

Against this backdrop, Ethiopia's EV push marks a dramatic pivot. The ICE ban, combined with import duty waivers and tax exemptions for EVs, signals a radical shift in transportation policy. If government-reported EV figures are accurate, they point to a wholesale transformation of the national vehicle fleet in a remarkably short time period.

How many EVs are there in Ethiopia?

According to the Ministry of Transport and Logistics, the country now has 100,000 EVs on its roads, accounting for roughly 8.3% of its estimated 1.2 million registered vehicles. If accurate, that would make Ethiopia the clear front-runner in EV penetration on the continent, and a surprising contender among top global adopters.

Why is Ethiopia switching to electric vehicles?

The switch to electric vehicles fits with Ethiopia's wider environmental strategy, positioning it as a leader in Africa's fight against climate change. It will help reduce carbon emissions from transport, which has been a big source of air pollution in cities like the capital, Addis Ababa.

Explore Ethiopia's transition to electric vehicles with an in-depth look at the legal and institutional framework shaping the shift. Learn about policies, regulations, and challenges in EV ...

Ethiopia's electric vehicle ban is a bold and risky move that reflects both the country's urgent economic needs and its environmental goals. While the switch to electric vehicles offers clear ...

Ethiopia, a landlocked country on the Horn of Africa, the largest and most populous country in that region. It lies completely within the tropical latitudes. The capital is Addis Ababa ("New Flower"), ...
