

Expanding production of solar cell modules

Access the interactive map here (shown above) of U.S. manufacturers of solar modules, mounting systems, power electronics and the battery supply chain.

In addition to growing module capacity, U.S. solar cell production capacity doubled in Q1 to 2 GW with the opening of a new factory in South Carolina.

The United States installed a record-breaking 50 gigawatts (GW) of new solar capacity in 2024, the largest single year of new capacity added to the grid by any energy technology in over two ...

WASHINGTON D.C. -- The United States has reached a historic manufacturing milestone, surpassing 50 gigawatts (GW) of domestic solar module production capacity. At full capacity, these factories can ...

In this article, we will explore the implications of this growth, the investments driving it, and its potential impact on job creation and future developments in solar technology.

After years of relying heavily on imported solar panels and their components, U.S. domestic solar module production capacity is finally on the up. Thanks to major policy shifts and ...

SEIA first set a goal in 2020 to reach 50 GW of US solar module production capacity by 2030 - enough power output to match 27 Hoover Dams. That goal spans the entire solar supply ...

The US boosted its solar module manufacturing capacity by a record 9.3 GW in the third quarter of 2024, with five new or expanded factories in Alabama, Florida, Ohio and Texas, bringing ...

Solar cells are an upstream portion of the solar manufacturing supply chain, serving as the final component of solar modules. "The surge in production of downstream components like ...

The United States is now the third-largest solar module manufacturer in the world, and more growth is on the way. Clean Energy Associates (CEA) projects that the U.S. will reach 13 GW ...
