

What is Adele - compressed air energy storage system?

The Adele - Compressed Air Energy Storage System is a 200,000kW energy storage project located in Stasfurt, Saxony-Anhalt, Germany. The electro-mechanical energy storage project uses compressed air storage as its storage technology. The project was announced in 2010 and was commissioned in 2013. Description

What is Adele - adiabatic compressed air energy storage?

ADELE (which stands for the German acronym for adiabatic compressed air energy storage for electricity supply) is a project that will begin construction in 2013 in Staßfurt, Germany. The project is a joint effort between RWE, General Electric, Zueblin, and the German Aerospace Center.

How efficient are Germany's pumped-storage power plants?

Efficiency is between 75 and 85%. Today, Germany has pumped- storage power plants producing a total of about 7,000 MW. The expansion potential is severely limited, especially in northern Germany where the balancing need is greatest.

What is Adele & RWE Power?

ADELE is bundling the know-how and experience of a power-plant operator, the manufacturing industry and research in an effort to clarify the open issues of the technology. RWE Power is coordinating the project. As future operator, it is drawing up the requirement profile.
