

How much is China's solar power generation

By May 2025, China's solar capacity had reached 1.08 billion kilowatts, accounting for nearly 30 percent of the total power generation capacity. Solar generation in the first five months rose by 57 percent, ...

In 2020, China saw an increase in annual solar energy installations with 48.4 GW of solar energy capacity being added, accounting for 3.5% of China's energy capacity that year. 2020 is currently the year with the second ...

In the first half of 2025, the country installed more than twice as much solar capacity as the rest of the world combined, accounting for 67% of global additions.

China's solar power capacity is on course to surpass coal this year A sunset glow lights up wind turbines and rows of solar panels at a wind farm in Qingyang, Gansu province, China.

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the first time.

More than 720 GW of solar capacity are in development: about 250 GW under construction, nearly 300 GW in pre-construction phases, and 177 GW of announced projects, according to the Global ...

Still, a dominant 62% of China's total annual power generation came from thermal power, reaching 6,171TWh, a 1.7% y-o-y decrease. 59% of this 62% share came from coal.

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

The country added 120 GW of wind and solar power in 2022, 290 GW in 2023, 360 GW in 2024, and 434 GW last year, of which about 119 GW of wind power and 315 GW of solar power, according to NEA ...
