

CSP signifies concentrated or concentrated solar power (CSP). The term solar thermal electricity (STE) is also used, but in principle includes non-concentrated systems e.g. solar chimneys or updraft tower ...

An all-season use of renewable energy sources for hot water, space heating and solar cooling is here indispensable. Therefore the latest sorption chiller and solar cooling kit developments...

The distinct advantage of the cold production based on solar energy is the high contemporaneity of solar irradiation and cooling demand (i.e., the use of air conditioning is highest when sunlight is abundantly ...

An all-season use of renewable energy sources for hot water, ...

Increasing electricity costs in Europe are pushing consumers and businesses to adopt solar-powered cooling systems that reduce dependence on traditional grids. Climate change-driven heatwaves and ...

This paper describes the main results of the EU project SACE (Solar Air Conditioning in Europe), aimed to assess the state-of-the-art, future needs and overall prospects of solar cooling in Europe.

This document provides an introduction to solar air conditioning technologies and strategies for reducing cooling loads. It was written by experts from several European countries and organizations with ...

Various European research and demonstration activities have advanced the field of solar energy for air conditioning of buildings. The project intends to review the state-of-the-art and to ...

The SACE project was initiated to study environmentally friendly air - conditioning, assess heat - driven cooling technologies for solar thermal systems, and evaluate solar cooling in Europe.

# Introduction of EU Solar Air Conditioning
