

# Is solar power profitable without subsidies

Here's the truth: solar energy is the most cost-effective form of new electricity generation in the United States, even without subsidies. It's fast to deploy, requires no fuel, and delivers ...

Under the Trump administration energy policy, as federal subsidies cease to buttress investor confidence and prop project viability, solar industry must shine on its own merits.

The renewable energy sector has faced a major adjustment: long-standing subsidies for wind and solar are being phased out. For decades, these tax credits fueled industry growth, but their ...

Coal, oil, and gas are the most efficient and profitable energy sources available. Over the past 20 years, wind and solar have received global subsidies of \$9 trillion.

This year's report concludes that renewables are the "most cost-competitive form of generation," even without subsidies.

According to Lazard's 2025 Levelized Cost of Energy+ report, utility-scale solar and onshore wind are now the most cost-effective forms of new-build energy generation - even without subsidies. Private ...

The solar industry's reliance on subsidies and mandates is not a sign of success but rather a symptom of a flawed system. Companies in the industry benefit from protectionism and ...

Without federal and state subsidies the solar cost would be about \$150 per megawatt hour. Because there are subsidies, the utility pays about \$40 per megawatt hour, and the remaining ...

Using this information, an Energy Institute blog comparing the profitability of corn vs. solar found that solar panels are not profitable without government subsidies.

While new technologies may require subsidies to catalyze their adoption, it appears that economies of scale are creating a path towards mass market acceptance of solar energy. There is ...
