Details City: Anqing Turbine (s): (manufacturer name not available) Total nominal power: 50,600 kW Under construction Onshore wind farm Owners: /ND

Shanghai Electric Power Generation Group is the core industry sector of Shanghai Electric Group, specializes in power generation equipment manufacturing, power generation engineering and full life ...

Wind power is the use of wind energy to generate useful work. Historically, wind power was used by sails, windmills and windpumps, but today it is mostly used to generate electricity. This article deals ...

From steppe to power source, China's wind energy sector is revolutionizing the country's electricity supply and taking on a global leadership role. With its vast landmasses in the north and an...

A valuable review of wind energy technology and its challenges is also presented in this paper, including the effects of wind farms on nearby communities, generation uncertainty, power quality issues, ...

To access additional data, including an interactive map of global wind farms, a downloadable dataset, and summary data, please visit the Global Wind Power Tracker on the Global Energy Monitor website.

About this data Electricity generation from wind power Figures are based on gross generation and do not account for cross-border electricity supply.

OverviewWind energy resourcesWind farmsWind power capacity and productionEconomicsSmall-scale wind powerImpact on environment and landscapePoliticsWind power is the use of wind energy to generate useful work. Historically, wind power was used by sails, windmills and windpumps, but today it is mostly used to generate electricity. This article deals only with wind power for electricity generation. Today, wind power is generated almost completely using wind turbines, generally grouped into wind farms and connected to the electrical grid.
