

Micro inverter overvoltage protection

What is a fast overvoltage protection mechanism?

Inverters, whether used for photovoltaic (PV) systems or energy storage facilities, typically include internal fast overvoltage protection mechanisms designed primarily to protect the inverter itself from damaging transients.

Can lightning protection be combined with SMA inverters?

Also, special features of combining overvoltage protection devices with SMA inverters are described. The document covers lightning protection in as far as it influences overvoltage protection. Lightning protection systems are intended to prevent damage to buildings from lightning strikes.

Why is the protection level at the inverter increased?

In addition, the protection level at the inverter is increased if the overvoltage occurs at one of the other strings. When excessive voltage is applied, voltage falls via the cable inductance. If the arrangement is not ideal, the protection level at the inverter is increased (see Fig. 6).

What is a self protection over voltage (SPOV) mechanism?

These mechanisms, referred to as Self Protection Over-Voltage (SPOV) mechanisms, have the added benefit of causing the inverter to cease to energize when the circuit voltage exceeds certain limits. The SPOV mechanisms thus can mitigate both ground-fault overvoltage (GFOV), and load-rejection overvoltage (LROV).
