What is an AC coupling inverter?

AC coupling inverters are used in solar battery backup systems to shift the frequency of alternating current (AC) power, allowing it to be stored in batteries for later use. What is an AC-coupled solar inverter?

AC-coupled systems involve multiple power conversions (DC to AC from the solar inverter, then AC to DC for battery charging). While this results in small energy losses at each stage, modern high-efficiency inverters minimize this effect. The round-trip efficiency of an AC-coupled system is typically around 85-90%.

What is AC coupling with a hybrid inverter?

For those with an existing solar installation, AC coupling with a hybrid inverter offers a practical and powerful pathway to energy storage. This approach minimizes disruption, leverages your current investment, and provides a robust solution for backup power and increased solar self-consumption.

Do I need to replace my solar inverter with AC coupling?

No, the main advantage of AC coupling is that you do not need to replace your existing solar inverter. The new hybrid inverter and battery system work in parallel with your current setup, making it an ideal solution for retrofitting storage onto an existing solar installation.
