

What are solar panel frames?

Solar panel frames are systems specifically designed to hold photovoltaic modules in place and provide the optimal tilt to capture the maximum amount of solar energy.

Why do PV modules need a good thickness?

Proper thickness facilitates the installation of the sealant and allows reduced sealant stress from differential thermal movement between the PV laminate and the supporting structure. The structural bite requirement is directly proportional to the wind load on the PV module and the dimensions of the module.

How do PV modules work?

PV modules are commonly mounted in aluminum frames to be mechanically attached to the supporting structure. The edges of the PV laminate (glass/backsheet or glass/glass) are inserted into the cavity of a U-profile. A silicone sealant is used for fixing the laminate inside the frame and ensuring water tightness.

What is the design stress for pv-8030 adhesive?

The Allowable Design Stress for Snow Load is 40,000 Pa (0.04 MPa) for Fortasun™ PV-8030 Adhesive and Fortasun™ PV-8303 Ultra Fast Cure Sealant and 50,000 (0.05 MPa) for Fortasun™ PV-8301 Fast Cure Sealant. The Allowable Design Stress for Dead Load (DL) for Fortasun™ PV-8030 Adhesive is 7,000 Pa.
