

Pristina solar Module Project

To support the green transition in Kosovo*, one of its largest solar photovoltaic plants will be constructed on former ash dump fields near Pristina with a capacity of up to 100 MW.

The project aims to address the city's inefficient, unreliable, and CO₂-intensive heat supply by integrating a solar DH plant that will be connected to the existing network via new pipelines.

Together with experienced district heating experts from Austria, the Big Solar concept was adapted to the specific conditions in Prishtina to create an efficient, cost-effective and sustainable solution for ...

To support the green transition in Kosovo*, the European Investment Bank (EIB) has signed a EUR33 million investment loan for the construction one of its largest solar photovoltaic plants ...

The Project includes the construction of solar collectors with an approximate area of 69,000 m² and a seasonal pit storage with a capacity of approximately 410,000 m³.

The facility was developed by German company J. v. G. Thoma and its subsidiary J. v. G. Jaha Energy in Pristina, Kosovo, and will look to supply the growing solar market in the region.

Together with our partner CES, we are working in a consortium to ensure that Solar 4Kosovo II is both technically sound and economically successful. With a total investment of EUR80 ...

As global demand for sustainable energy solutions surges, the Pristina photovoltaic module project has emerged as a blueprint for large-scale solar initiatives. This article explores the project's significance, ...

The realization of two huge solar district heating projects in the Balkans is progressing. The pre-qualification tender for a 44 MW collector field with seasonal storage in Pristina, Kosovo, ended on 11 ...

The Pristina solar heating plant is a landmark project that underscores a broader European commitment to renewable energy. It demonstrates that with strategic investment and ...
