

Smart Solar-Powered Container Terminals for Ports and Terminals

China is moving full speed ahead in transforming its ports into greener and smarter hubs, building or planning more automated terminals than any other country. A new generation of near ...

With the new Tuas Port, opened in 2022, Singapore is building what will become the largest fully automated container terminal in the world. The port uses real-time vessel tracking and dynamic berth ...

This is the world's first smart zero carbon container terminal, which incorporates a distributed photovoltaic system across 16,000 square meters of rooftop and installs two wind ...

Learn how terminals are embracing renewable energy, highlighting solar, wind, electrification & grid resilience with LBCT.

This article presents a global Top 12 ranking of automated ports, strictly from an automation perspective, and explains how smart terminals are redefining global trade logistics.

In this whitepaper, we delve into the transition to green terminals. By conducting a literature review, we explore various operational strategies.

"By working hand-in-hand with PNCT and the city of Newark, our seaport is now home to a large solar energy project capable of generating significant energy for one of its major container ...

These issues highlight the need for a deeper understanding of how to effectively develop and implement smart port solutions.

At the Port Newark Container Terminal in New Jersey, solar panels have been shoehorned into a tightly packed, high-traffic shipping facility, without disrupting operations or taking up...

It includes the conversion of all terminal lighting to LED fixtures, as well as the implementation of hybrid straddle carriers, energy-efficient electric cranes, and propane-powered terminal tractors.
