

The impacts of thermal capacity, thermal conductivity and convective heat transfer resistance of Kang plate on the Kang's heat transfer process were investigated.

The thermoelectric generator (TEG) is a solid-state energy converting device that converts heat directly into electrical energy. TEGs are silent, scalable, and reliable, as they have no moving parts.

This paper propose solar kang heating system in cold regions. System performance and heating effect were analyzed.

The solar kang, which integrates the positive features of the solar air collecting system and the conventional Chinese kang, could serve as a low-polluting heating device alternative to the ...

A novel solar coupling floor and Kang surface heating system is proposed, a mathematical analysis model of thermal performance is established, and experimental validation is carried out. The ...

In this paper, the author use solar energy with capillary network systems as the added heating measure of kang . The influence of the system on the surface temperature of Kang and the indoor temperature ...

Yang et al [13,14] developed a kang system that integrates a solar air collector into the Chinese kang and built a dynamic model to analyze its heating performance.

System performance and heating effect were analyzed. We selected two typical rooms. One was set in traditional kang, and the other one was solar Kang type.

This heating system combines the characteristics of local houses and peasant's living habits, using slope roof as its heat collection devices, changing the traditional "Kang" into heat storage pond, and ...

We tested the performance of the solar kang and validated the heat transfer model. A Chinese kang, normally serving as the heated bed and the heat recovery of a cooking stove, is ...

All electric Fuzzy Logic (FL) based smart building integrated Photovoltaic-Thermal (PVT) tri-generation (heating, cooling and Power) technology meets one of Korea government's new research and ...

Solar power generation electric heating kang
