

Solar power generation expectations

Electricity generation from solar, measured in terawatt-hours.

Renewable sources of electricity generation are continuing to grow strongly around the world, with global capacity expected to more than double by 2030, according to the IEA's latest ...

Forecasts from the U.S. Solar Energy Industries Association (SEIA) show sustained growth through 2030. Solar energy continues to charge ahead, increasingly becoming an essential ...

Solar photovoltaics are expected to meet around half of the increase in global electricity demand over 2024 and 2025, and solar and wind together are expected to meet as much as 75% of the growth, ...

Across all regions, developing a skilled workforce and setting ambitious solar and storage targets are essential tasks. In these times of political uncertainty, low-cost solar power could turn into ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

According to the latest Short-Term Energy Outlook from the U.S. Energy Information Administration (EIA), solar power generation in the U.S. is projected to skyrocket by 75% from 163 ...

In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power generation over the next ...

The solar power sector is projected to experience significant expansion in the coming years. As solar energy becomes a key component of the global energy mix, there are expectations ...

According to the International Energy Agency (IEA), solar power will account for over 30% of global electricity generation by 2050, reinforcing the shift towards a solar-powered future.
