

Solar power generation has investment prospects

The future of solar energy is set for exceptional growth as advancements in technology, increased investments, and strong policy support continue to push the industry forward. In recent ...

There is no doubt that solar power has become the driving force of the global energy transition. Looking ahead, however, there remain challenges that must be addressed for solar to ...

As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion kilowatthours (kWh) in 2023 to 286 billion kWh in 2025.

- o At the end of 2024, global CSP capacity reached approximately 7 GW.

Policymakers in some of the world's largest economies are reducing support for solar power generation. Even so, Goldman Sachs Research expects rapid growth in the sector, with global ...

BNEF finds that utility-scale solar photovoltaic investment was particularly hit, falling 19% compared to the first half of 2024. The markets that saw the largest year-on-year declines in ...

Photovoltaic (PV) solar accounted for 56% of all new electricity-generating capacity additions in the first half of 2025, remaining the dominant form of new electricity-generating capacity ...

Power sector investment in solar photovoltaic (PV) technology is projected to exceed USD 500 billion in 2024, surpassing all other generation sources combined. Though growth may moderate slightly in ...

The trajectory is clear: solar is set to dominate new electricity generation in the U.S. for years to come. Financing and policy may bring turbulence, but the long-term growth path remains ...

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax credits and imposed new restrictions, ...
