

Solar power generation was hit by hail

Data from insurer Axis shows that throughout the world, its open and closed claims for hail damage between 2019 and 2025 affected 1.3 million solar modules and 2.7 GW of capacity.

This first article highlights the benefit of hail monitoring and stow by telling the story of three projects in Texas that were exposed to the same system of hailstorms as Fighting Jays Solar, a ...

Images of solar installations devastated by hail or twisted by high winds are becoming more common. In the aftermath of Hurricane Milton in October 2024, footage of solar projects ...

The bottom line is that damaging hail is occurring close to many PV solar sites across the U.S. This is just one of the insights from the 2025 Solar Risk Assessment, an annual research effort...

The solar farm, spanning 3,300 acres, was hit by a severe hailstorm, leaving many of its solar cells shattered. Drone footage of the farm went viral online, showing the extent of the baseball ...

In mid-March, a hailstorm outside of Houston crippled an enormous solar plant, breaking panels and leaving local residents concerned about metals leaking into water supplies. Solar panels ...

Solar developers and manufacturers have taken steps to reduce the risk from hailstorms, which involves a combination of sophisticated weather forecasting and panels that can turn to avoid...

Texas" solar power growth has happened in spite of its vulnerability to hail damage. A cluster of states from North Dakota to Texas has the highest frequency and severity of hailstorms ...

Thousands of solar panels were shattered when a storm dropped golf ball-sized hail on a 3,300-acre, 350 MW utility-scale project in suburban Houston early last year. Production fell sharply ...

As reported by Inside Climate News, a hailstorm caused hail to strike solar panels at over 90 mph, causing significant damage to parts of the 350-megawatt Fighting Jays Solar project.
