

Solar greenhouses in southern Europe are a sustainable production system. There are more than 15,000 families involved, and the work has evolved thanks to innovation and digitalization, ...

BRUSSELS/LONDON, Aug 7 (Reuters) - A major increase in solar power generation in southern Europe played a leading role in averting energy shortages during the heatwaves of recent weeks when...

The book includes the most recent research on the relationship between landscape and renewable energy in Southern European countries, from a wide range of disciplines.

Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the EU's ...

Europe's rural areas, especially in southern and eastern countries - from Romania to the Iberian Peninsula - hold enormous potential for renewable energy production, which could be crucial ...

Our approach Large Scale Solar Southern Europe is far renewables more than just another solar event our utility-scale battery capacity is set to grow sevenfold to 58GWh by 2030, with BESS technology ...

In order to evaluate limits and chances of solar park construction and exploitation for the establishment of semi-natural grasslands, we compared plots outside and under solar panels in ...

Southern Europe's solar greenhouses feed more than 500 million people on the continent every year, meeting the needs of consumers, responding to all market quotas, and laying the ...

We investigate the effect of energy independence on Europe's energy system design. We show that self-sufficiency constraints lead to a more equitable distribution of costs and installed...

The production of fruits and vegetables in solar greenhouses in southern Europe is leading to reduced water footprint, lower emissions, and more sustainable cultivation structures, with ...
