

The first power storage in Western Europe

In November, Altea Green Power began construction of a 1GW battery energy storage system project in Italy, called "Black Bess". The project, which will consist of four sites located in ...

This innovative tool systematically catalogizes all energy storage projects within Europe, from the first planning phase to operational operation.

Medieval Europeans perfected charcoal storage in clay pots. While these methods seem primitive, they established the fundamental principle of energy storage: preserving surplus resources for future use.

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the ...

Let's face it: Europe's energy storage game is getting hotter than a Tesla battery during peak discharge. With operated battery storage capacity now exceeding 20GW [1], the continent is rewriting the rules ...

A total of 11.9GW of energy storage across all scales and technologies was installed in Europe in 2024, LCP Delta has said.

Amsterdam, September 30, 2025 - Sungrow, global leading PV inverter and energy storage system (ESS) provider, today announced the successful grid connection of the first 400MWh of ENGIE's ...

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new opportunity ...

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade as a recent ...

The Nant de Drance pumped-storage power plant, located in south-western Switzerland, is one of the most powerful in Europe. Commissioned in 2022 after 14 years of construction, it lies 600 ...
