When did wind power start?

An important moment in history for wind power was during the US energy crisis of the 1970s, which forced researchers and leaders to explore alternative energy options.<sup>7</sup> Development came primarily from the US with a research program backed by NASA, designed to find a utility scale energy resource.

When was the first windmill used to generate electricity?

The first windmill ever used to generate electricity (wind turbine) was in 1887 in Cleveland, Ohio, designed by inventor and electrician Charles F. Brush. Today, most wind devices that we see are wind turbines, which generate electricity, but in some areas windmills are still used for grinding or pumping water. Modern History of Wind Power

How long has wind been used as an energy source?

Wind has probably been used as an energy source for more than 1500 years. In times when other energy sources were unknown or scarce, wind energy was a very successful energy source for industrial and economic development. Wind energy became a marginal source when inexpensive, easily accessible and abundant energy sources became available.

When did wind energy become a marginal source?

Wind energy became a marginal source when inexpensive, easily accessible and abundant energy sources became available. From the point of view of wind energy's contribution to economic development, the history of wind energy can be divided into four, partly overlapping, periods.
