

The photovoltaic panel sector has been correcting

US solar boomed in Q1 2025, but new tariffs and House-passed tax credit cuts threaten jobs, factories, and energy security.

Declines in residential solar markets have been a hit to the industry--but its foundation is strong. We look at why the future is still bright for solar.

On October 1, 2024, the U.S. Department of Commerce issued a preliminary decision to impose countervailing duties on c-Si panels and cells produced in Vietnam, Malaysia, Thailand, and ...

In the months following the passage of the One Big Beautiful Bill Act (OBBBA), the solar industry has been adapting to new and not fully settled policy. Several uncertainties still hang over ...

Right now, U.S. manufacturers do not produce enough solar panels to meet the nation's demand, but industry investments and federal tax incentives have been making progress, though ...

U.S. off-site corporate PPAs have been dominated by the technology sector, with governments and universities coming in a distant second, followed by the healthcare industry.

As we enter 2025, several pressing issues keep solar companies awake at night. The recent survey conducted by SolarReviews indicates that more than half of solar businesses (56%) ...

First Solar in late September opened a \$1.1 billion, 3.5-GW panel production hub in Alabama, pushing its domestic manufacturing footprint to nearly 11 GW -- more than all US module ...

Low prices for modules are stimulating demand in new markets, but hurting manufacturers, who are competing intensely to maintain market share. The global PV build forecast ...

High commodity prices and supply chain bottlenecks led to an increase of around 20% in solar panel prices over the last year. These challenges have resulted in delays in solar panel deliveries across ...
