

The relationship between energy storage and energy in Bosnia and Herzegovina

With this decision, Bosnia and Herzegovina has become obliged to transpose and implement EU requirements on integrated energy union management and climate action in the framework of the ...

Some of the energy found in primary sources is lost when converting them to useable final products, especially electricity. As a result, the breakdown of final consumption can look very different from that ...

The research highlights the multidimensional nature of energy poverty, incorporating variables such as income, energy expenditures, and heating methods.

The environment sector in Bosnia and Herzegovina was critically stagnant: there was a lack of environmental policy and legislation, poorly developed management and implementation capacities, ...

Energy production in Bosnia and Herzegovina is carried out using primary energy from solid fuels, wood biomass, hydropower, as well as other forms of RES (solar and wind energy).

Electricity and oil products have decreased, with biomass rising significantly. Energy prices for households remain regulated and lower than EU averages, while industrial prices are deregulated ...

Bosnia and Herzegovina is set to have its first battery energy storage systems installed in the transmission network, which will provide auxiliary services.

Bosnia and Herzegovina has shown interest in increasing its use of renewable energy sources to diversify its energy mix and reduce dependence on conventional energy sources. The country has ...

The current review has shown that Bosnia and Herzegovina, compared to other Balkan countries, has significant potential for implementing renewable energy sources and meeting the ...

This project aims to implement a battery energy storage system (BESS) for EPBIH, aimed at enhancing the decarbonisation of the energy sector in Bosnia and Herzegovina.
