

# There seems to be a film on the photovoltaic panel

Did you know a compromised photovoltaic panel film can reduce energy output by up to 30%? Like sunscreen for your solar array, this protective layer shields delicate cells from UV damage and ...

What is EVA, and why is it the unsung hero inside every solar panel? In this video, we dive deep into Ethylene-Vinyl Acetate (EVA), the critical encapsulant film that protects your...

Just picked up a brand new 2021 Tab320s Boondock and the solar panels have what looks like a protective plastic film over them (see pic). A corner is kind of peeling back and it's activating some ...

The protective film on solar lights serves a vital purpose in safeguarding the solar panel during transportation, installation, and early use. While it may slightly reduce efficiency, it's typically best to ...

When the protective film ages or gets damaged, its capability to catch light is severely reduced, and it becomes apparent in the solar panel's electrical output.

Yes, you absolutely must remove the protective film from your solar panels upon installation. Leaving it on will significantly reduce your panels' efficiency and can even cause ...

When you receive your solar lights, you may be wondering if you need to remove the plastic film on the solar panel. This is a common question, and the answer is yes! The plastic film is ...

New solar panels often arrive with protective film--but should it stay on? This comprehensive guide explains the crucial difference between factory shipping films (which must be ...

When you decide to remove the film, do so carefully by turning off the solar light, peeling it off slowly, and disposing of it responsibly to maintain the efficiency and longevity of your outdoor ...

Identify the protective film by its shinier, slightly imperfect surface and feel for an overhanging edge on the panels. Improper removal can scratch the panels, reduce light efficiency, ...
