

Tokyo Glass solar Power Generation

Window glass that absorbs heat rays and generates electricity is installed in the city. We are currently developing next-generation heat ray shielding materials.

An official from Chiyoda Ward gives a speech at the opening ceremony of the pilot project to test a trailer equipped with power-generating glass in Akihabara, Tokyo.

NSG says it will demonstrate transparent photovoltaic windows made by US technology company Ubiquitous Energy in an indoor environment at Takanawa Gateway Station, a train station ...

The invention uses glass that can utilize indoor and residual light and could supplant some of the energy generated by bulky rooftop solar panels. And unlike its common roof-based ...

An invention that comes from Japan and transforms windows into solar panels thanks to the translucent material. We have spoken several times about the need to guarantee an energy ...

A Japanese chemical manufacturer and construction company have jointly developed "photovoltaic power generation glass" that can be installed on the external walls and windows of buildings.

TOKYO - Imagine a future where the glass windows and walls of buildings such as homes and offices can directly harness solar energy in place of unsightly and space-consuming solar ...

Japanese optoelectronic and semiconductor manufacturer Kyosemi Corporation has developed a solar cell called the Sphelar that could turn any pane of clear glass into a solar energy ...

Businesses will continue to develop products and services that take full advantage of the benefits of solar power generation. Houses equipped with solar power generation equipment will ...

It offers a high level of transparency and high power generation, as well as a simple design with high design quality. It is highly durable and maintenance-free, capable of generating ...
