

Why doesn't Europe use wind power

Despite a turbulent two years, Europe's wind sector remains a major success story and a foundation of the region's net zero agenda with no realistic alternative

Offshore wind power generation offers important advantages: a high number of operating hours, low variability and, consequently, lower forecast errors and lower balancing costs compared to ...

WindEurope warns Europe is falling behind on wind power capacity. New 2025 data shows Germany leading the way, while most EU countries struggle with permits and grid expansion.

Europe's efforts to expand wind power capacity are falling short of the levels required to meet the European Union's 2030 climate and energy targets, despite wind power providing 20% of ...

A thriving wind industry is key for securing Europe's competitiveness and lower, more stable energy prices. Bureaucracy, unviable project economics and grid bottlenecks are currently ...

OverviewBy countryEU Wind Power PackageEurope's Wind Energy EventPublic opinionSee alsoExternal linksIn 2014 wind power in Denmark provided some 39 per cent of Danish domestic electricity and Denmark is a leading wind power nation in the world. The Danes were pioneers in developing commercial wind power during the 1970s and today almost half of the wind turbines around the world are produced by Danish manufacturers such as Vestas and Siemens Wind Power.

Ireland is the best location in Europe for wind power, [citation needed] as it is situated on the Western edge of Europe and is exposed to high winds from the Atlantic Ocean and Irish Sea.

Wind energy was 20% of all the electricity consumed in Europe. But Europe is not building enough new wind farms. The EU built only 13 GW last year, well below the 30 GW a year it ...

Europe's biggest renewable energy producers-- Spain, France, and Germany --have cut back record amounts of wind power this year, as electricity grids struggled to handle an ...

Wind energy powered 20% of all electricity consumed in Europe in 2024, but there are three things threatening the EU's 50% wind by 2050 goal.

Europe isn't immune to this costly issue, with a recent analysis warning the continent's "insufficient" grid investment is delaying progress toward electrification.
