

Why is solar power declining

Experts say the dip in residential solar installations is only temporary. Here's where the industry stands and where it's going. The solar industry is contracting in 2024. The solar industry...

Researchers uncover the factors that have caused photovoltaic module costs to drop by 99 percent. Photos show a solar installation from 1988 (left) and a present-day version. Though the ...

An MIT-led study revealed the hidden contributors to plummeting solar costs, and many had nothing to do with solar at all. The drop in solar energy costs over the past five decades has ...

Forecasts for solar deployment from 2025 to 2030 have been revised downward by 4 to 18 percent due to policy changes or regulatory risk. Concerns are growing about permitting reform ...

The residential solar market experienced a challenging downturn in 2024 after years of impressive growth. Despite a significant decline in installations and company valuations, experts ...

To take it from recent headlines, it seems as though the global solar-power industry, following half a decade of record growth and governmental investment, flew just a bit too close to the ...

After several years of 30 percent annual growth in installations, 2024 saw a decline: fewer panels were installed in many markets, and companies' valuations declined. This led to large capital ...

Residential solar installs dropped 32% last year, but community solar and smart state policies show a clear path forward.

Residential solar installations declined 31% in 2024. Over the last year, industry titans like SunPower, Sunnova, and Mosaic Solar have filed for bankruptcy.

Though solar represented just 3.4% of the nation's electricity generation in 2022, studies show that rooftop solar could eventually meet residential electricity demand in many states if...
