

In this paper, we analyse literature data to understand the role of wind-solar complementarity in future energy systems by evaluating its impact on variable renewable energy ...

To help inform and evaluate the FlexPower concept, this report quantifies the temporal complementarity of pairs of colocated VRE (wind, solar, and hydropower) resources, based on their native generation ...

This article addresses the complementary capacity planning of a wind-solar-thermal-storage hybrid power generation system under the coupling of electricity and carbon cost markets.

Here, we demonstrate the potential of a globally interconnected solar-wind system to meet future electricity demands. We estimate that such a system could generate ~3.1 times the ...

Due to the different complementarity and compatibility of various components in the wind-solar storage combined power generation system, its energy storage complementary control is very important.

This paper develops a capacity optimization model for a wind-solar-hydro-storage multi-energy complementary system. The objectives are to improve net system income, reduce wind and ...

Interprovincial interconnection further amplifies the benefits of wind-solar complementarity and reduces energy storage requirements. This study offers valuable insights into coordinated wind-solar-storage ...

Strategies on storage and interconnection are proposed to support decision-making. This work investigates the wind-solar complementarity characteristics over large-scale marine regions, ...

Multi-energy complementary RE bases are vigorously promoted in China. This paper systematically reviews the global and domestic hydro, wind and solar power resources and ...
