

Young and Dangerous Solar Power Generation

While natural gas, coal, and nuclear power remain dominant, their combined share of generation is expected to decline as renewable energy expands. Utility-scale solar is the fastest ...

CLIMATEWIRE | Wind and solar generation eclipsed coal throughout 2024, marking the first time renewable power outperformed coal for a full year. But carbon emissions from electricity still...

In 2023, the U.S. electric power sector produced 4,017 billion kilowatthours (kWh) of electric power. Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for ...

As OpenSolar data is showing, solar will grow to supply over half of all energy globally in just over 10 years. And as the entirety of Gen Z enters the workforce over the next ten years, a new ...

Along with financial challenges, environmental concerns and fears of climate change are prominent among Gen Zers and younger millennials. Installing home solar panels is a way for individuals to not ...

The global climate crisis demands collaborative solutions. Young people are crossing borders, forging partnerships with like-minded individuals, NGOs and social enterprises to advance ...

Since 2020, California has installed more giant batteries than anywhere in the world apart from China. They can soak up excess solar power during the day and store it for use when it gets dark.

With climate change posing a significant threat to our planet, renewable energy sources like solar power are more crucial than ever. With their innovative thinking and passion for change, the...

However, portable solar generators provide a cleaner, safer, and more eco-friendly way to power your home in the aftermath of a storm or any time the grid goes down. Since they don't use ...

This study examines the significant challenges presented by the rising frequency and severity of climate change-induced extreme weather events--such as hurricanes, floods, heatwaves, ...
